
Examination of the exclusion criteria

- Radioactivity inspection
- Dangerous reaction behavior
- Outgassing behavior on contact with water
- Determination of caloric value
- Determination of TOC and loss of ignition
- Testing for flammability
- Worst case determination of heavy metal content in solids

Site-specific testing for waste suitability

- Testing of the setting behavior during conditioning
- Building physics
- Pneumatic eligibility

Declaration analysis

At the accredited laboratory of the K+S Group's Research and Analysis Centre

Case-related opinions from expert bodies

For waste that is suitable for underground recovery your contact person at K+S Entsorgung coordinates necessary studies and official tests conducted by external institutes including:

- Dust prognosis (worst-case analysis)
- Assessment of toxicological safety
- Permits for recovery of waste
